Protection for the future

Project Experience

ULCC M/S Viking Drive

Project information

Location	Turkey
Owner	Gram car
Project	Internal ramps
Date	2013-06

Systems and substrates

Pretreatment	<i>Angle grinder</i>	
3 coat system ink skid	Uni-Micazinc MC	100 µm T/U
	Uni-Aluprotect MC	100 µm T/U
	Uni-Gritt	18 size
	Uni-Aluprotect MC	100 µm Full coat

The project to protect the 1100 m² of the internal ramps between the nine car decks onboard the giant vessel.

Due to circumstances the vessel crew removed the old skid system by hand before entering the yard. During new building construction of the vessel the yard did not give the surface of the ramps any surface structure for the system to hook on to so when the old system was removed a surface profile had to be made.

It was decided that the only way to make this was by angle grinders with grinding disks.

To make the surface preparation by sand blasting was not possible in relations to the extent of cleaning that had to be performed after the job was completed.

The vessel crew made all 10 Ramps by the self's.

A few days after the vessel loaded new cars for Mercedes, BMW, Chevrolet, Audi and others
